STG - (A) United States patent
AB - A method of making chip stacks begins with the formation of a
plurality of panels having apertures therein and conductive pads on
opposite sides thereof. Solder paste is deposited on the conductive
pads prior to mounting plastic packaged IC chips within each of the
apertures in each of the panels so that opposite leads thereof reside
on the conductive pads at opposite sides of the apertures. The plural
panels are then assembled into a stack, such as by use of a tooling
jig which aligns the various panels and holds them together in
compressed fashion. The assembled panel stack is heated so that the
solder paste solders the leads of the packaged chips to the conductive
pads and interfacing conductive pads of adjacent panels together, to
form a panel stack comprised of a plurality of chip package stacks.
Following cleaning of the panel stack to remove solder flux residue,
the individual chip package stacks are separated from the panel stack
by cutting and breaking the stack. Score lines across a topmost panel
and transverse slots within remaining panels therebelow result in the
formation of strips of chip package stacks when longitudinal cuts are

made through the panel stack. The remaining portions of the uppermost panel within such strips are then snapped along the score lines thereof to separate the individual chip package stacks from the strips.
